

LOGZILLA DOCUMENTATION

LogZilla App Store

Pre-built vendor packages (Cisco, Palo Alto, Juniper, AWS) adding parsing rules, dashboards, and triggers with normalized fields for consistent analysis.

LogZilla App Store · Generated April 29, 2026 · logzilla.ai/docs/logzilla-appstore

LogZilla Apps are vendor, or technology-specific, packages that extend the platform. Each app typically includes parsing rules, dashboards, and triggers tailored to a data source. After installation, incoming events are correctly parsed and enriched, dashboards render meaningful views, and alerts are ready to use with minimal configuration.

The App Store is available in the LogZilla UI at Settings → Applications. See [Administration → LogZilla Apps](#) for details about app contents and management.
