# /api/dashboards

---

## GET

**Summary:** List all dashboards

Always filtered by owner, unless you have permission for managing dashboards AND set "show\_all" parameter - then returns them all.

## Parameters

Name	Type	Required	Description
title	string	No	
title__iregex	string	No	
owner	array	No	Multiple values may be separated by commas.
ordering	string	No	Which field to use when ordering the results.
page	integer	No	A page number within the paginated result set.
page_size	integer	No	Number of results to return per page.
export	boolean	No	Return exportable fields only
show_all	boolean	No	Do not filter objects owned by current user

## Responses

200

## POST

**Summary:** Create a new dashboard

You can provide full data for the new dashboard, or you can clone existing one with `source_id` parameter, pointing to another dashboard. When cloning you can also set `"clone_widgets"` to true to clone all widgets - otherwise they will be just added to the dashboard without cloning (often `read_only`).

## Parameters

Name	Type	Required	Description
<code>clone_widgets</code>	boolean	No	when cloning, clone widgets instead of adding read only
<code>source_id</code>	integer	No	clone existing dashboard

## Request Body

```
{
  "example": "request body"
}
```
