/api/scripts/run

POST

Summary: Run one script and return its output

Runs an installed trigger script on the Script Server with a supplied event and waits for it. A non-zero returncode is a failing script, not a failing request.

Parameters

Name	Type	Required	Description
timeout	integer	No	Seconds to wait for the script (1-30)

Request Body

```
{
  "example": "request body"
}
```
